corematerials@3acomposites.com

CONTACT

Mr Gauthier ERIC
General Management: Subsidiary / BU / Branch Director
TEL +41 417896600
corematerials@3acomposites.com

MAIN ACTIVITY

- PRODUCER OF RAW MATERIALS

MAIN APPLICATION SECTORS

3A Composites is a global organisation and division within Schweiter Technologies (operations in Europe, the Americas, India, China). The company manufactures and commercializes lightweight products for the architecture, visual communication, transportation, industrial and wind energy markets with market leading brands such as AIREX®, ALUCOBOND®, BALTEK®, COMFLOOR®, DIBOND®, FOAMLITE®, FOREX®, KAPA®, POLYCASA®.

3B FIBREGLASS**5 C 40**

MAIN ACTIVITY

- COMPOSITE PART MANUFACTURING & TESTING EQUIPMENT PRODUCER

MAIN APPLICATION SECTOR

ADM-ISOBLOC is one of the leading global suppliers of machinery and technology with more than 60 years of experience. The family business offers state-of-the-art-equipment to its customers. In more than 50 countries machines with recipe-controlled continuous metering, mixing and degassing for reactive resin bonded mixtures are successfully producing for satisfied customers. Due to the new developed vacuum system, void-free blends are guaranteed. R&D and realization of custom designed solutions provide a basis for optimal customers support. The service covers all phases of an industrial execution like consulting, system analysis, engineering, implementation and construction of machinery and world-wide after-sales-support.

INTEGRATORS BY INDUSTRY

MAIN APPLICATION SECTORS

AGESIA solves problems by introducing structural thermoplastic composites in a radical way, mainly by replacing steel components

where steel did not give a solution even after numerous incremental steps.

Agesia developped a new method to connect 2 different thermoplastic matrices and thermoplastic to metal. The CIB(R) (covalent intermediate bonding) is a new braking through low energy technology for vast surfaces.

NEW PRODUCT

AGESIA SANDWICH PANEL

The Agesia sandwich panel is developed based on the Neomera(r) Organosheet from Johns Manville and a PET foam connected with a newly developed connection method. This development aims at applications in the domain of heavily and dynamically loaded structures, such as bases for ISO containers.

MAIN ACTIVITY

- PRODUCER OF RAW MATERIALS

MAIN APPLICATION SECTORS

Building on its unique set of expertise in materials science, Arkema offers a portfolio of first-class technologies to address ever-growing demand for new and sustainable materials. With the ambition to become in 2024 a pure player in Specialty materials, the Group is structured into 3 complementary, resilient and highly innovative segments dedicated to Specialty Materials -Adhesive solutions, Advanced Materials, and Coating Solutions- accounting for some 85, 5% of Group sales, and a well-positioned and competitive Intermediates segment. Arkema offers cutting-edge technological solutions to meet the challenges of, among other things, new energies, access to water, recycling, urbanization and mobility, and fosters a permanent dialogue with all its stakeholders. The Group reported sales of around €9,52 billion in 2021, and operates in some 55 countries with 20, 200 employees worldwide. arkema.com.

NEW PRODUCT**Elium® resin**

With its Elium® liquid thermoplastic resin, Arkema is bringing a unique solution to the market for the manufacture of composite parts, based on the same manufacturing processes as those used by fabricators to produce thermoset resin parts. It offers the tremendous advantage of recyclability, but also of thermoforming and thermowelding. Many sectors could benefit from these key assets: wind energy, automotive, construction and sports.

Mr Olivier MUNAUX

Projects / Programs: Manager

TEL +33 (0)1 41 96 88 50

olivier.munaux@cgtech.com

MAIN ACTIVITY

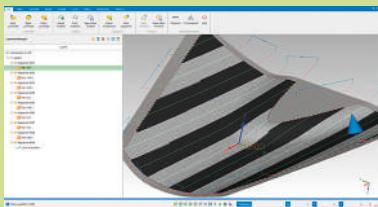

- SOFTWARE SUPPLIER FOR DESIGN AND/ OR MANUFACTURING

MAIN APPLICATION SECTOR

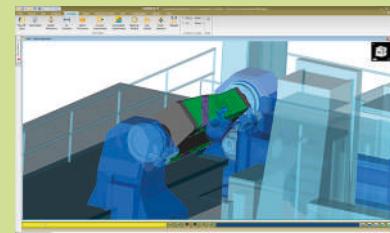

Headquartered in Irvine, California, CGTech specializes in numerical control (NC/CNC) simulation, verification, optimization, and analysis software technology for composites and manufacturing. CGTech was founded in 1988. Since that time, our main software product, VERICUT®, has become the industry standard. With offices worldwide, VERICUT software is used by companies of all sizes, universities/trade schools, and government agencies.

NEW PRODUCTS**VERICUT Composite Programming**

VERICUT Composite Programming (VCP) reads CAD surfaces and ply boundary information and adds material to fill the plies according to user-specified manufacturing standards and requirements. Layup paths are then linked together to form specific layup sequences and output as NC programs for the automated layup machine.

**VERICUT Composite Simulation**

VERICUT Composite Simulation (VCS) is a simulated work environment for automated composites manufacturing. Through CAD models and NC programs, VCS simulates the sequence of NC programs on a virtual machine, including head changes, probing, knife cutting, and more. Material is applied to the layup form via NC program instructions in a virtual CNC simulation environment. The simulated material applied to the form can be measured and inspected for stack thickness, ply offset, ply angle, and other manufacturing priorities to ensure the NC program follows manufacturing standards and requirements. A report showing simulation results and statistical information can be automatically created.

MAIN ACTIVITIES

- ASSOCIATIONS, THIRD PARTIES, SERVICES & CONSULTANTS
- COMPOSITE PARTS PRODUCER BY PROCESS
- COMPOSITE PARTS PRODUCER BY SPECIALTY

MAIN APPLICATION SECTORS

Specialized in composite, COGIT Composites offers

- R&T, Laboratory dedicated to advanced process (Stamping, Overmolding, PAEK 3D printing)
- Advanced engineering of composite parts (Design, Structural Calculation, Optimization)
- Process simulation: Hot Stamping, polymer Injection, Textile Forming
- Manufacture of ThermoPlastic parts by Stamping, Over-Molding (PEEK, PEKK, PEI, PPS), Injection
- 3D print of advanced polymers (PEEK, PEKK, PEI...)

French R&D agreement (CIR) - EN910.

NEW PRODUCT**Pellet Extruder**

Pellet extruder compatible with any 3D printer & robot dedicated to PEEK, PEKK, PEI, PA, PPS
Extruder Temperature: 500°C - Maximum Flow: 0, 4 kg/h.

MAIN ACTIVITIES

- COMPOSITE PART MANUFACTURING & TESTING EQUIPMENT PRODUCER
- COMPOSITE PARTS PRODUCER BY PROCESS
- SOFTWARE SUPPLIER FOR DESIGN AND/ OR MANUFACTURING

MAIN APPLICATION SECTORS

Conbility offers production machines for the processing of tapes, prepgs and towpregs into tailored blanks, laminates, pipes and pressure vessels / hydrogen tanks. Conbility conducts feasibility and material evaluations and prototype production of tailored blanks, locally reinforced laminates and thermoplastic/thermoset wound components, e.g. hydrogen tanks. Together with partners, we offer services for product

development as well as processing of tailored blanks using thermoforming/injection molding and subsequent part testing. Besides, Conbility provides software/consulting for carbon footprint and cost assessment.

MAIN ACTIVITY

- PRODUCER OF FIBER/RESIN BASED SEMI-FINISHED INTERMEDIATES E.G. PREPREG

MAIN APPLICATION SECTORS

Delta-Tech, a Toray Group company since September 30th of 2015, is a European producer of thermosetting prepgres, with its core business in carbon fibre reinforcements. Delta's materials are widely used for high-end applications - such as Luxury/GT cars and racing cars - to manufacture structural parts, exterior panels and carbon look interiors. Delta group is made of two companies: Delta-Tech, founded in Lucca, Italy, in 1999 and controlled company Delta-Preg, founded in Teramo, Italy, in 2001. Delta-Tech develops and fabricates resin matrices, while Delta-Preg produces prepgres using matrices supplied by Delta-Tech. Alongside the materials, Delta-Preg provides technical support and specific solutions to part manufacturers, designers, consultants, OEM's, to obtain the best results with thermoset prepg technology.

MAIN ACTIVITY

- COMPOSITE PARTS PRODUCER BY PROCESS

MAIN APPLICATION SECTORS

DEMGY, sustainable & smart plastic solutions DEMGY designs and manufactures high-performance plastic and composite solutions that are lighter than metal, to promote energy savings. Our unique Multiplasturgy® concept, a one-stop shop for our 14 areas of expertise, is evolving to become circular: circular Multiplasturgy®. A new cycle is beginning thanks to eco-design, which allows us to manage the end-of-life of our products and their capacity to be recycled. Our 2 R&D centers create innovative production processes to meet all your requirements for complex parts. DEMGY is a key player in Industry 4.0 thanks to additive manufacturing (carbon reinforced PEKK, PA11), the transformation of 100% recyclable bio-composites, hybrid composites and the generation of thermoplastic composite products with complex «net-shape» geometry.

MAIN ACTIVITIES

- PRODUCER OF FIBER BASED TEXTILE INTERMEDIATES
- PRODUCER OF RAW MATERIALS

MAIN APPLICATION SECTORS

Evonik Industries is one of the world leaders in specialty chemicals. Evonik manufactures a range of products that can be found in almost all components of fiber-reinforced composites. It supplies core materials for sandwich construction, silanization, thermoplastic and thermosetting resin matrices as well as thermoplastic tapes, and the components for matrices such as crosslinkers, reactive diluents, catalysts, impact strength modifiers or processing and process additives. Some of these products are used in sizings for glass or carbon fibers, and in adhesives for joining fiber-reinforced composites. Our experts think in composite solutions and enable circularity. Working with us you have the support of the entire team of specialists at Evonik. In short, you talk to one, you talk to all.

PHYre®
BY EXTRACTHIVE

HALL 6 STAND №4

Since 2015, EXTRACTHIVE has been developing innovative technologies to transform industrial wastes into valuable secondary raw materials. We soon realized that the composite material sector was in demand of available, high quality and low impact carbon fibers. Therefore, we conceived the PHYre® technology as solvolytic approach to valorize carbon fibers from thermoset composites.

The PHYre® recycled carbon fibers, the material of choice for your high-end applications:

- ◆ An unbeaten environmental impact
- ◆ Preserved mechanical properties
- ◆ Compatibility with numerous manufacturing processes
- ◆ Availability in various length (5 to 100 mm)

Mr Jérémie BOUGHERARA

Sales: Director

TEL +33 472048927

jeremy.bougherara@fivesgroup.com

MAIN ACTIVITIES

- COMPOSITE PART MANUFACTURING & TESTING EQUIPMENT PRODUCER
- SOFTWARE SUPPLIER FOR DESIGN AND/OR MANUFACTURING

MAIN APPLICATION SECTORS

The Fives, Composites & Automated Solutions business line provides comprehensive composite manufacturing solutions.

With a strong foundation based on renowned legacy names such as Cincinnati, Forest-Liné, and Lund Engineering, Fives is responsible for the largest install base of tape layer and fiber placement machines in the world.

Solutions include:

- Standard equipment or highly customizable lamination solutions for fiber placement and tape laying systems
- Unique high-efficiency In-Process Inspection (IPI) technology
- Design-to-build solutions in pre-cure and post-cure processes including stringers and spars forming, radius filling, assembling, demolding, US inspection, and much more.
- Specialties in automated end-to-end solutions that increase productivity and reduce waste across the complete line.

From design, manufacture, installation, and commissioning, to technical support during the machine's lifecycle, Fives' dedicated teams drive projects as true partners.

MAIN ACTIVITY

- PRODUCER OF FIBER BASED TEXTILE INTERMEDIATES

MAIN APPLICATION SECTORS

Gividì Fabrics is a reliable, efficient and technologically advanced Italian company; founded in 1962, the company manufactures Technical Fabrics based on E and S glass, carbon and other High-Performance fibers with a weaving capacity of more than 30 millions square meters per year. Gividì Fabrics' unique know-how in surface chemistry has led to the development of Finish recipes and processes for the most demanding applications. The quality of its products, the quest for continuous improvement and a passion for innovation characterise Gividì Fabrics' activity and made Gividì Fabrics an undisputable reference point in its market segments by delivering high quality innovative solutions that maximize value for our customers. We're proud to provide innovative solutions to meet the ever evolving customers' needs.

MAIN ACTIVITIES

- COMPOSITE PARTS PRODUCER BY PROCESS
- COMPOSITE PARTS PRODUCER BY SPECIALTY
- COMPOSITES END-USERS & INTEGRATORS BY INDUSTRY

MAIN APPLICATION SECTOR

GKN Aerospace is the world's leading multi-technology tier 1 aerospace supplier, with a mission to be the most trusted and sustainable partner in the sky. As a global company serving the world's leading aircraft manufacturers, GKN Aerospace designs, manufactures and delivers an extensive range of advanced aerospace systems, components and technologies – for use in commercial and defence aircraft ranging from helicopters, business jets, passenger planes and advanced air mobility vehicles to the most advanced fighter aircraft. GKN Aerospace is committed to achieving net-zero emissions by 2050. Lightweight composites, additive manufacturing, electrical wiring interconnection

systems and innovative engine systems help to reduce emissions and weight on today's aircraft, while it collaborates with global partners to accelerate the development of zero-emission aircraft technologies, including hydrogen-powered propulsion and all-electric flight. GKN Aerospace is market leading in aerostructures and engine systems, with 15,000 employees across its 38 manufacturing locations in 12 countries.

MAIN APPLICATION SECTORS

Indorama Ventures (IVL) presents decades of industry knowledge, experience and brand equity of the legacy businesses in the fiber industry. IVL continues its journey with a coherent strategy to deliver superior long-term customer value. Today, the group has a consolidated revenue of USD 14.6 Bn, with 147 manufacturing sites in 35 countries on three continents and 26,000 employees. During JEC World 2023, the Mobility Group of IVL will present their latest developments in the field of new reinforcements and sustainable products from Europe. The site in Obernburg, DE, is currently expanding its product portfolio to include hybrid rovings based on glass fibers, aramids and viscose with a thermoplastic matrix. Enka® TecTape hybrid roving is its tailored solution. Automated production of composite structures based on Enka® TecTape hybrid roving enhances the composite's performance and keeps production costs low. Furthermore, the Czech site Lovosice provides a broad range of sustainable and flexible solutions, like fiber-based composites reinforced with its high tenacity viscose fibers, which meets the request for bio-based composites.

MAIN APPLICATION SECTORS

Ingersoll Machine Tools Inc., Camozzi Group, is a leader in advanced manufacturing processes and a global supplier of additive and subtractive machine tools for the aerospace, defense, energy, and all heavy industrial sectors. The Camozzi Machine Tools division lineup includes: MasterSpeed™ and Atlas Vision HS for the accurate, reliable, high-speed drilling and trimming of large, complex-geometry composite parts;

Mongoose™, Mongoose Hybrid™ and Hawk™ for the deposition of structures in composite; MasterPrint® family, one of the largest existing thermoplastic 3D printer, capable to produce extra-large, hollow-parts in a single piece for multiple sectors.

Ingersoll operates all machines at its development centers in Rockford (US) and Milan (Italy) for third party manufacturing.

Part of same division CMT is Innse-Berardi from Italy specialized in subtractive technologies including advanced solutions on finishing composite parts and 3D printed structures. Both companies in synergy are an ideal strategic and technological partner, capable of providing customers with a complete turnkey service.

MAIN ACTIVITY

- SOFTWARE SUPPLIER FOR DESIGN AND/ OR MANUFACTURING

MAIN APPLICATION SECTOR

It's Prodigy is an innovative Italian startup founded in 2017, with offices in Italy, United Arab Emirates, Australia and Luxembourg. We have specialization in the sectors of Insurance, Fintech, Telco, Public Administration and Consulting.

Highly focused on technology, our digital transformation services include the analysis, design, development and creation of technologies and services, with the implementation of Industry 4.0 technologies including the Internet of Things, Artificial Intelligence, Big Data, System Integration and robotics fields. Our team is made by 50+ developers with specific know-how for sectors with more than 8 years of experience.

Some examples of our projects are: App mobile of fintech new banking services Business Process Management Platform in Telco Quotes Generator Platform for Assurance company Business Intelligence Reports API for Public administration.

NEW PRODUCT

DataProdigy

DataProdigy is a platform for managers to support the fast generation of business intelligence data without the usage of BI or Excel files. Thanks to a Big Data engine and Artificial Intelligence, DataProdigy is able to use human language: it transforms each question into a call reporting and immediately creates a new business report. With DataProdigy you avoid wasting time and additional costs for the processing of reports and it covers all the process of approval of each report. It is a customizable product, able to connect with all company platforms (SalesForce, Sap, Google Cloud, Oracle, AWS, etc.) and generate intuitive reports in a short time. Of course, it can be used in multiple countries because it is a multilingual system.

DATA PRODIGY

SUMMARY
DataProdigy is a new generation BI platform available via website or mobile aiming to create personalized business reports instantly. DataProdigy is a cloud-based solution that integrates with your company's data sources and allows for real-time integration with company's data warehouses, databases or cloud storage. A streamlined approval process is offered to save time and costs by automating the review, validation process and streamlining the approval.

DESCRIPTION
DataProdigy's platform is designed to help managers generate quick and accurate business intelligence reports using natural language processing and machine learning techniques. Thanks to cutting-edge Big Data and artificial intelligence technology, they can generate reports in seconds using natural language or voice commands, in order produce straightforward reports and charts without having to learn complex software. DataProdigy also offers a highly customizable and search-friendly interface with a variety of enterprise platforms, including SalesForce, SAP, Google Cloud, Oracle, and AWS, and supports management through their approval process.

KEY FACTS
Founded: 2020
Money Raised: €250,000 (Founder)
Employees: 4
HQ Country: Milan, Italy
Latest Investment: -

CASE STUDY
Credit Agricole needed to analyze real-time user comments from e-commerce platform such as Google Maps. We customized DataProdigy with a machine learning algorithm that could automatically generate reports instantly. With seamless integration and the ability to ask fast questions, DataProdigy streamlined their business processes, saving time and costs, and helping them stay ahead of the competition.

MAIN ACTIVITY

- COMPOSITES END-USERS & INTEGRATORS BY INDUSTRY

MAIN APPLICATION SECTORS

Founded in 1872, Maschinenfabrik LAUFFER is a leading manufacturer of machines and systems for the electronics and the metalworking industry and is based in Horb am Neckar, Germany. Our team of more than 260 employees produces presses and production lines for the laminating industry, the plastics and molding industry as well as for the metalworking and the powder technology. Our customers appreciate our innovative energy, the reliability and quality of our systems and press lines, as well as our flexibility in the elaboration of complex solutions for our customers. With an export rate of up to 70 %, our presses are in use worldwide. For further information please visit: www.lauffer.de.

NEW PRODUCT**LAUFFER RMV LINE**

LAUFFER Pressen is one of the leading manufacturers for vacuum presses with comprehensive process and engineering know-how for laminating printed circuit boards in the electronic industry as well as for the lamination of composites.

Our press technology accompanies PCB manufacturers all over the world with innovative press solutions. www.lauffer.de.

MAIN APPLICATION SECTORS

The Leibniz-Institut für Verbundwerkstoffe GmbH (IVW) is a nonprofit research institution of the state of Rhineland-Palatinate and the University of Kaiserslautern-Landau (RPTU). It researches fundamentals for future applications of composite materials, which are of great importance for the mobility of the future, the fields of energy, climate and environment, production technology as well as for health care. New materials, construction methods and manufacturing processes are investigated and - after the basic understanding has been developed - tailor-made for the respective requirements. The focus is on the entire process chain, from basic materials to characterization and simulation, from construction methods and production technology to component testing and recycling. New ideas and innovative concepts are not only an essential part of the research and further development of the institute, but also lead to spin-offs. Newly acquired knowledge is transferred, above all into science, but also into teaching, the interested public and industrial applications.

MAIN APPLICATION SECTORS

SensXPERT is a technology brand of NETZSCH Process Intelligence GmbH, a NETZSCH Group corporate venture. The integrated Equipment-as-a-Service solution heavily contributes towards sustainable composite production, achieving to decrease of up to 50% in existing scrap and 30% in cycle time reduction. It allows complete process transparency in real-time.

NEW PRODUCT**SensXPERT Digital Mold**

SensXPERT Digital Mold combines advanced sensor technology and material science with artificial intelligence to characterize material behavior in sync with machine and cavity. It boosts process efficiency by evaluating and controlling all critical influencing factors and supports all major composite materials associated processing techniques.

Processing Lines for the Production of Carbon Fibers - Best-in-class production equipment from the market leader!

ONEJOON is the world leader for thermal processing equipment used in the production of oxidized PAN fibers, carbon fibers and carbon paper & felt. Our oxidation ovens are best-in-class and provides the innovative technologies that have been adopted by the industry. Our carbonization furnaces have been frequently installed and successfully operated in carbon fiber production lines across the globe.

With our long-standing experience and solid expertise, we are the preferred partner of well-known manufacturers and the go-to partner for new market entrants, which results in a market share of > 50 %.

NEW PRODUCTS

E2E End-to-End Oxidation furnace

Next generation kiln for the production of Carbon Fibers! The oxidation and stabilization process is considered to be one of the most important steps in Carbon Fiber production. Excellent performance, low energy consumption and a design optimized for short turnarounds is what helps our customers to reach or even exceed their production targets.

– E2E –
End-to-End Oxidation Furnace

Low and High Temperature Carbonization Furnaces

The furnaces are designed with a modular concept that allows a freely customizable amount of heating zones and zone dimensions. This approach supports the required individual temperature profile. High quality materials and innovative heating concepts ensure a low energy consumption while providing excellent temperature uniformity to the tow band.

Low and High Temperature
Carbonization Furnaces

MAIN ACTIVITY

- COMPOSITE PARTS PRODUCER BY PROCESS

MAIN APPLICATION SECTORS

Polyworks Concepts is a subcontractor specializing in the manufacture of composite material parts.

We are able to produce any type of partst. Also We are specialized in the landscape integration of relay antennas and interior fittings of vehicles.

MAIN ACTIVITIES

- PRODUCER OF FIBER BASED TEXTILE INTERMEDIATES
- PRODUCER OF FIBER/RESIN BASED SEMI-FINISHED INTERMEDIATES E.G. PREPREG

MAIN APPLICATION SECTORS

Porcher industries is a world leader in high-performance thermoplastic composites and technical textiles. With 1,650 employees on 3 continents and 12 manufacturing sites, Porcher Industries designs and produces innovative materials with exceptional properties that are suitable for aerospace, defense, automotive, building, industry, sport sectors.

NEW PRODUCT**On demand: new PP/flax solution**

Porcher industries expands its range of thermoplastic composites with a solution based on polypreg and flax fabrics made from commingled rovings of flax/PP yarns. Other thermoplastics can be considered such as PA11 or PLA biopolymers. It is primarily designed for automotive decorative interior trims, such as dashboards, central console, door panels... The ability to combine various parameters, such as flax thread thickness, commingled thermoplastic thread ratio, fabric weaving style, fabric color dying and mold surface finish, enables numerous visual design possibilities and On Demand development. These Polypreg® can be thermo-compressed with very short cycle time and over molded for backing structure and attachment clips.

MAIN ACTIVITY

- PRODUCER OF FIBER/RESIN BASED SEMI-FINISHED INTERMEDIATES E.G. PREPREG

MAIN APPLICATION SECTORS

Propex Furnishing Solution (PFS) is a producer of innovative thermoplastic composites and technical textiles. Between our plants in the USA, India, Germany, and Hungary, PFS is continuously pioneering innovative composite and technical textile solutions for a myriad of industries. At PFS, we are creating a stable foundation for products that the world uses every day. The technical textiles and innovative composites are produced in a deep integrated production process. From luggage, sports equipment to automotive, transport, anti-ballistic and tactical application; from resin to thermoformed parts; based on the unmatched flexibility of Curv® and VersaComp® the application areas are manifold. 100% polypropylene thermoplastic composite. DESIGNED to make an IMPACT.

NEW PRODUCT**Thermoplastic Composites - Curv®**

Those thermoplastic composites are outstanding materials that combine the versatility of a 100% thermoplastic with the high performance of a fiber reinforced composite. Those Composites capture the advanced mechanical properties of highly oriented polypropylene tapes in a self-reinforced polypropylene matrix. Parts made with Curv® exhibit high stiffness, high tensile strength and outstanding impact resistance: unique properties in a 100% polypropylene thermoplastic composite. DESIGNED to make an IMPACT.

MAIN APPLICATION SECTORS

PSC designs and manufactures high-frequency (HF) dryers. Our state-of-the-art fiberglass roving dryers are the world standard and are used by the most advanced fiberglass manufacturing companies. Our unique design allows for easy automation to reduce labor costs and handling damage. PSC dryers are also used for fiberglass mat and chopped strand. For composites processing, PSC HF pre-heaters are used in many pultrusion lines with significantly higher line speeds for thick parts. Our HF pre-heaters can also be used to quickly heat SMC parts prior to moulding.

MAIN ACTIVITIES

- **DISTRIBUTORS, AGENTS & REPRESENTATIVES**
- **RECYCLER OF COMPOSITE RAW MATERIALS, INTERMEDIATES & FINISHED PARTS**

MAIN APPLICATION SECTORS

Samaro has both a 47-year experience in the distribution of specialty chemicals and a solid expertise in the field of composites. We provide technical solutions for the design of optimized composite materials by offering reinforcements used in the fibre arrangements, the resin that transmits stresses and the core materials needed for the development of sandwich materials. Gelcoats and composite tooling materials are the logical complements of our offer. From your choice of process, we can co-construct the best technological solution: structure, matrix and processing mode, and then optimize it with our partners.

NEW PRODUCT**ARALDITE 2080 & 2081**

Low odor, Non-Flammable adhesives and primer-free acrylate adhesives with exceptional bond performance on multiple substrates. Araldite 2080 has high performance on metals when Araldite 2081 has high performance on plastics.

MAIN ACTIVITY

- RAW MATERIALS & INTERMEDIATES
MANUFACTURING EQUIPMENT
PRODUCER

MAIN APPLICATION SECTOR

Technotrans solutions GmbH (formerly gwk), which operates under the technotrans umbrella brand, has made a name for itself as a specialist in innovative cooling and temperature control technology with more than 50 years of experience. Since the beginning of the year, we have been pooling our expertise with Reisner Cooling Solutions GmbH to form the «solutions» competence team under the technotrans umbrella brand - our customers can thus expect a unique product portfolio of highly efficient and reliable cooling and temperature control systems in the temperature range from -80°C to +400°C. As a system supplier for the entire temperature control process, from cooling and temperature control to water treatment and cleaning of injection molds.

NEW PRODUCTS

Temperature Control Units

technotrans offers standardized temperature control units for a wide range of industrial applications. In line with individual user requirements, the units are divided into product lines with differentiated equipment levels.

Chillers and cooling systems

Reliable chillers and refrigeration systems are a central component of an optimized production plant. Only if they are perfectly matched to the requirements of the manufacturing process will perfect production results be achieved.

MAIN ACTIVITY

- SOFTWARE SUPPLIER FOR DESIGN AND/ OR MANUFACTURING

MAIN APPLICATION SECTORS

Thermo Fisher Scientific supplies innovative software solutions for composite materials characterization and quality control. At JEC WORLD 2023, we will showcase the latest features and breakthrough capabilities of Thermo Scientific™ Avizo™ Software. Whatever modality is used to acquire digital data (X-ray computed tomography, synchrotron, electron microscopy), Avizo Software provides optimized workflows addressing the entire research-to-production cycle: from analysis of fibers, pores, and matrices in labs to automated quality control of composite parts in production environments.

MAIN ACTIVITIES

- PRODUCER OF FIBER/RESIN BASED SEMI-FINISHED INTERMEDIATES E.G. PREPREG
- COMPOSITE PARTS PRODUCER BY PROCESS
- COMPOSITE PARTS PRODUCER BY SPECIALTY

MAIN APPLICATION SECTORS

For over 60 years, Vitech Composites is dedicated to manufacturing semi-finished epoxy prepreg materials (e.g. Fabrics, UD Ribbons, Towpregs, Vitow(c)) and small diameter composite Tubes and Housings.

NEW PRODUCTS**Towpregs and UD Ribbons**

Vitech manufactures Towpregs of 3K, 6K, 12K, 24K (Based on E,R,S glass fiber or carbon fiber 240 to 550 GPa modulus) using our own formulation of chemical B-stage epoxy and also Prepreg UD Ribbons (PITCH or PAN based Carbon, Glass, Aramid, Flax, etc...) from 35 to 350 gsm aerial weights, with a maximum width of 600 mm and up to 300 roving spools.

**Tubes and Housings**

Vitech produces high-performance composites (e.g. Carbon, Glass, etc...) tubular profiles of small diameters whithin tolerances of a few 1/100 mm and up to 5m long; made from Filament Winding and/or Prepreg Wrapping.

MAIN ACTIVITY

- **COMPOSITE PART MANUFACTURING & TESTING EQUIPMENT PRODUCER**

MAIN APPLICATION SECTORS

The WICKERT WKP S presses are designed for manufacturing mouldings in composite materials. WICKERT produces a wide range of presses, either standard or adapted to the clients individual tasks requirements. The WICKERT product range consists of press systems including automation for RTM, HP-RTM, wet-lay up, prepreg, thermoforming, compression mouldings as well as all related processes and

clamping forces from <20kN to >110.000 kN for a variety of product dimensions and product types.

MAIN ACTIVITIES

- PRODUCER OF RAW MATERIALS
- PRODUCER OF FIBER BASED TEXTILE INTERMEDIATES

MAIN APPLICATION SECTORS

Tayho Advanced Materials Group Co., Ltd is one leading manufacturer of advanced materials, including aramids, Aramid paper and advanced composites.

NEW PRODUCT

Meta aramid, Para aramid, Aramid pulp and paper

Meta aramid for PPE and filtration. Meta/Para aramid paper for honeycomb manufacturing, well approved and used in Airplane, Helicopter, High-speed train, Metro and Yacht. Para aramid for OFC, rubber reinforcement, ballistic protection, sealing and friction composites. Aramid Twisted Yarn, Fabric, Short Cut and Pulp are widely used in composite materials which dramatically reduce weight and increase effective load.

ZwickRoell is a global leader in materials testing. Whether tensile test, compression test or flexure tests, function tests or standard tests, texture analysis or fatigue testing: with our product groups we offer testing solutions for test methods in R&D.

JEC COMPOSITES MAGAZINE

The world's leading
composites magazine

Your free subscription to **JEC COMPOSITES MAGAZINE**

JEC Composites Magazine is the point of contact of the international Composites Community, 6 times a year, with topics covering scientific information, business, technology, manufacturing and application sectors trends. Discover technical articles, interviews, composites applications, market analysis written by several international contributors..., along with JEC analyses and commentaries.

NEW: Enjoy the magazine With the mobile App!

- Access all the past issues and Special Issues
- Set your reading preferences
- Create your online library with your selected issues, articles
- Stay informed in real time with the "News" section

Subscribe for free to the leading
composites Magazine and newsletters:

JEC FORUM ITALY 2023

Business Meetings & Conferences

June 6-7, 2023 | BOLOGNA FIERE
ITALIA

In partnership with

The biannual Business Meetings event
for the composites industry in Italy.

2-day event with Business Meetings,
Workshops and Conferences

www.jec-italy.events

#JECItaly

COMPANIES BY APPLICATION SECTOR

AEROSPACE

JEC COMPOSITES PUBLICATIONS

Enhancing your
composites knowledge

DISCOVER THE NEW JEC OBSERVER

CURRENT TRENDS IN THE GLOBAL COMPOSITES INDUSTRY 2022-2027

€249
(VAT Excl.)

DIGITAL ONLY

This new JEC publication, written in collaboration with Estin & Co is the annual barometer of the composites industry, which provides a forecast growth up to 2027. This publication seeks to give an ample perspective and outlook of the industry for the next five years using graphs, market dynamics and analysis, and key leaders' insights to illustrate the state of composites globally.

The application industries for composite materials were impacted by the pandemic to different extents and are also recovering at different rates. But overall, the composites industry is facing a positive future directly linked to application industries seeking sustainable solutions where composite materials can play a significant role, or even offer THE solution.

JEC COMPOSITES MAGAZINE

The world's leading
composites magazine

Your free subscription to **JEC COMPOSITES MAGAZINE**

JEC Composites Magazine is the point of contact of the international Composites Community, 6 times a year, with topics covering scientific information, business, technology, manufacturing and application sectors trends. Discover technical articles, interviews, composites applications, market analysis written by several international contributors..., along with JEC analyses and commentaries.

NEW: Enjoy the magazine With the mobile App!

- Access all the past issues and Special Issues
- Set your reading preferences
- Create your online library with your selected issues, articles
- Stay informed in real time with the "News" section

Subscribe for free to the leading
composites Magazine and newsletters:
